

washing & drying

Washing Instructions

- Vests can be washed on a short gentle cycle (vests should not be immersed in water for more than 15 minutes).
- Vests can be washed in hot or cold water.
- Regular washing powder can be used.
- Sterilising agents can be used (not bleach).
- Vests can be washed with other garments.
- Vests can be dry cleaned.

Please Note: Gel pockets will slightly over-swell when immersed in water for more than 15 minutes. This may cause small amounts of gel to escape along the seam lines and vests can become slightly heavy. This will not effect the vest or its performance.

Drying Instructions

- Vests can be hung out to dry.
- Vests can be tumbled dried on gentle cycle for up to 15 minutes.
